## DENTAL

SPECIALIZED LAMPS FROM DURO-TEST

You are the most thorough and conscientious dentist in the world. You use color-mapping pads, digital imaging, 35mm photographs and sketches to make sure your lab has a perfect facsimile of the tooth you're matching. Your customer leaves your office content but calls back the next day angry because the prosthetic tooth looks like just that - a prosthetic tooth. What went wrong? Well, if you're not currently using Vita-Lite full-spectrum lighting in your office or lab, it could be your lights.

Color is reflected light. No matter what color-matching method you use, you need the proper lighting. If the light is even slightly off, chances are your customer will notice in their daily routine that something looks wrong and all of the hard work put into sculpting and placing the bridge or crown will be wasted. Can you afford to repeat this process? Can you afford to lose this customer?

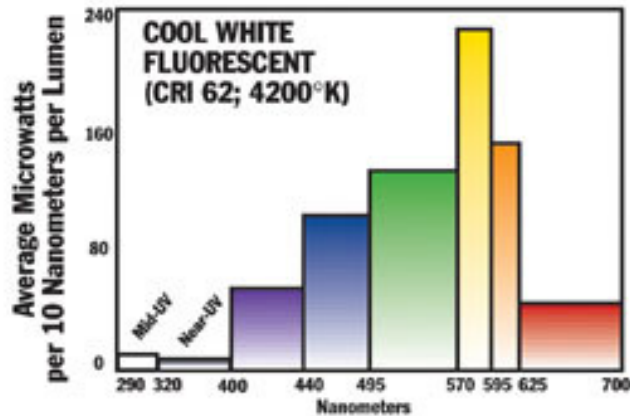

Duro-Test provides a kind of insurance for this problem. We make light bulbs that replicate Twelve O'clock Noon sunlight almost perfectly. A color rendering index measures how accurately the human eye can perceive colors with a given light source.

On this hundred-point scale, Duro-Test's Vita-Lite full-spectrum fluorescent ranks 91 while standard fluorescent bulbs peak in the upper sixties. No other fluorescent bulb on the market can even come close to Vita-Lite.

It's simple really. Part of your job is to accurately decipher colors. Our job is to make lighting systems that allow you to do this. We just happen to do our job better

than anyone else.

Now Available! - Receive the benefits of full-spectrum Vita-Lite throughout your office with new Spiralux compact fluorescent. True full-spectrum fluorescent lighting that screws into a standard incandescent socket!

**Buy the Best – Buy Vita-Lite.**
